WC Fee Schedule MARs Do More Than Limit Payments

- WC fee schedules have been shown to be effective at controlling costs
- However, MARs set too high (relative to GH) lessen that effectiveness
- High proportions of WC payments at (or near) the MAR suggest that fee schedules wind up becoming market prices for WC
- High MARs (relative to GH) may result in some providers charging WC claimants more than they would patients covered under GH

Source: NCCI: Price Impact of Workers Compensation Physician Fee Schedules:
Preliminary Results
Annual Issues Symposium - May 2013

Prepared by the Department of Labor and Workforce Development

Surgery

Multi-State Distribution of Reimbursements for Surgery

- One-third of WC payments for Surgery are at the MAR
- WC often pays more than GH for comparable surgical services
 - 70% of GH payments for Surgery are below the MAR
 - 25% of surgical services in GH are paid at 55% or more below the MAR

Preliminary Results
Annual Issues Symposium - May 2013

Prepared by the Department of Labor and Workforce Development

Evaluation and Management

Multi-State Distribution of Reimbursements for E&M Services

At the 25th percentile

- WC is 12% below the MAR
- GH is 32% below the MAR
